

MJD waveforms and energy

Clean test events; detector 133, run 50928

— Low energy: 158 keV - - - High energy: 1132 keV

(a,b) Examples nearest cohort energy medians. (c) All 410 events:
low / high quartiles: 103 each; middle half: 204 (gray). Normalization
precedes model-specific representations; RMS uses samples 0–199.
